

Architectural Drafting Degree, Architecture Schools, Architects

Architectural Drafting Specialists have a variety of career possibilities. They may find employment with **Residential and Commercial Builders, Architect and Design Firms** and **Engineering Firms**. Generally Architectural Drafting is taught as a two year course resulting in an **Associates in Applied Science** degree. Individuals who have always had a knack for drawing have an opportunity in this field to turn that skill into a career.

Design and drafting skills are also needed to become **Plans Examiners** and **Building Inspectors**. A degree in Architectural Drafting combined with some training about municipal building codes can provide you with a career opportunity at the **City** or **County** level.

Architectural Drafting offers a multitude of career options, depending on where your interests lie. Perhaps the most intriguing option might be taking an Architect's concepts and putting them into visual form. Most Architectural Draftsmen also work with **CAD** programs, adding a three dimensional element to their work.
